PLUGGED IN

Good morning everyone, and welcome to the twelfth entry of *Plugged In*. This is a recap of the two meetings we had to prepare for the competition later this morning.

On the 21st, we demonstrated our robot to students from Marshall Elementary School and explained the basics of FIRST Robotics to them. The meeting that day was spent evaluating what occurred during the competition at Churchland High School in Portsmouth and what actions could be improved on. Then, for the meeting on the 23rd, we used the entirety of the 6 hours we had to work on the robot. The programmers ran tests on the code for the driving and winch motors, while the team picked out a driver and operator for the matches. Other members redesigned the bumpers for more reinforcement. Finally, on the 24th, some team members went to Deer Run High School to set up our pit area.
