PLUGGED IN

Good evening everyone, and welcome to the seventh entry of *Plugged In*.

The meeting on February 21st was the final day of the FRC build season. So, all of the individual teams pitched in to complete the robot. Then, the programming team tested out the code for both the door mechanism and the coil on the finished robot. Finally, we bag the robot, concluding our time to work on the robot.

On February 23rd, the mechanical team constructed the brackets that will be used to attach the bumpers to the chassis during matches. The electrical team worked on the electric components that were not on the robot when it was bagged and made sure they could switch the limit on. Other members of the team were assigned to construct a cardboard robot statue which will be located in our pit while at competitions.
