PLUGGED IN

Good evening everyone, and welcome to the tenth entry of *Plugged In*.

We had a additional meeting on March 13th, which the team spent working on the winch so we could install it onto the robot during the available six hours for the next meeting. Then, on March 14th, the programming team tested all programs made for the robot, while both mechanical and electrical. we utilized three of the six hours we could tinker with the robot.

Since the meeting on March 16th was our final time to prepare for the competition this weekend, we made sure everything was prepared for Friday. The financial team created a scouting form, while the drive and communications teams helped wherever needed. The winch was attached to the robot during the last of the six hours by mechanical and electrical.

Then, on March 17th, we put together a toolbox and finished the cardboard robot decoration. Later on in the evening, a few team members went to Churchland High School to set up the pit and get the robot prep for inspection. Now, we are ready for this competition
